

A GOOD EXPERIENCE

LET'S MAKE FARMING
MORE PRODUCTIVE AND
MAKE PRODUCTION
MORE COST EFFECTIVE

Vision & Mission

Felixper is based on flexibility to deliver a wide range of fertilizers to the farmers all around the world. Located in Germany and working with key R&D and generic suppliers, our mission is to maintain high quality for our products and to build a lasting partnership with our partners and distributors.

TABLE OF CONTENTS

Potassium Sulfate	1
Calcium Nitrate	2
Monoammonium Phosphate	3
Monopotassium Phosphate	4
Urea Phosphate	5
Potassium Nitrate	6
Diammonium Phosphate (Crystal)	7
Diammonium Phosphate (Granular)	8
Magnesium Sulfate (Heptahydrate)	9
Magnesium Nitrate	10
Zinc Sulfate (Monohydrate)	11
Manganese Sulfate (Monohydrate)	12
NPK + TE (Soluble)	13
NPK + TE (Granular)	14
FerroGarten (Fe EDDHA 6%)	15
Pro Mix (Mixture of Micronutrients EDTA)	16
Pro Iron 13 (Fe EDTA)	17
Pro Zinc 15 (Zn EDTA)	18
Pro Manganese 13 (Mn EDTA)	19
Pro Calcium 14 (Ca EDTA)	20
Pro Copper 15 (Cu EDTA)	21
Kalium Thiosulfate (KTS)	22
AminoGarten L (Liquid Amino Acid)	23
AminoGarten S (Solid Amino Acid)	24
HumiGarten L (Liquid Humic Acid)	25
HumiGarten S (Solid Humic Acid)	26
AlgaGarten L (Liquid Seaweed Extract)	27
AlgaGarten S (Solid Seaweed Extract)	28
Colorina (Fruit Coloring)	29
Florina (Flowering and Fruit-Set Promoter)	30
Growthina (Growth Promoter)	31
Fulvina (Liquid Fulvic Acid)	32
Rootina (Root Development)	33
Potassium Phosphite	34
Ammonium Polyphosphate (Slow Release Phosphorus)	35
SulfAzote (Slow Release Nitrogen)	36

Potassium Sulfate

- Fully water-soluble and crystallized powder potassium sulfate
- Makes a non-turbid water solution without any residue
- Extremely low chloride content
- Suitable for application through different fertigation systems
- The best option where high potassium contents are required
- Suitable for crops with high sulfur requirement
- When applied during the fruit ripening period, it gives bigger fruits with higher quality, color and flavor

Available
packages

25 kg
50 kg
Big bag

Component	Concentration (w/w)
Potassium (K_2O)	50%
Sulfur (SO_3)	43%

Calcium Nitrate

- Fully water-soluble and granular calcium nitrate (2-4 mm)
- Makes a non-turbid water solution without any residue
- With high purity and extremely low Cl and heavy metals content
- Suitable for application through different fertigation systems
- Calcium is the most effective element of cell wall structure that prolongs shelf life of the fruits
- Due to low mobility of calcium in plants, this element must be supplied to the plants regularly in the required times
- Felixper calcium nitrate application prevents physiological disorders like bitter pit in plants

Available packages | 25 kg
50 kg
Big bag

Component	Concentration (w/w)
Total N	15.5%
Calcium (CaO)	27%

Monoammonium Phosphate

- Fully water-soluble and crystallized powder monoammonium phosphate
- Makes a non-turbid water solution without any residue
- With high purity and extremely low Cl and heavy metals content
- Suitable for application through different fertigation systems
- Contains the highest P content among common fertilizers that helps root growth and development during the early growth stages
- Suitable for crops with high phosphorus requirement
- The nitrogen in this product help in meeting crops N requirement

Available packages | 25 kg
50 kg
Big bag

Component	Concentration (w/w)
N	12%
Phosphorus (P_2O_5)	61%

Monopotassium Phosphate

- Fully water-soluble and crystallized powder monopotassium phosphate
- Makes a non-turbid water solution without any residue
- With high purity and extremely low Cl and heavy metals content
- Suitable for application through different fertigation systems
- Monopotassium phosphate is a nitrogen free fertilizer which is suitable for the situations that phosphorus and potassium are needed at the same time but there is a limitation to use nitrogen
- Suitable for crops with high phosphorus requirement
- Improves root and shoot growth at early growth stages

Available packages | 25 kg
50 kg
Big bag

Component	Concentration (w/w)
Potassium (K_2O)	34%
Phosphorus (P_2O_5)	52%

Urea Phosphate

- Fully water-soluble and crystallized powder urea phosphate
- Makes a non-turbid water solution without any residue
- With high purity and extremely low Cl and heavy metals content
- Suitable for application through different fertigation systems
- Due to acidic pH, it is suitable for preparing fertilizers blends, it improves the situation of alkaline soils and also it cleans the nozzles and drippers in fertigation systems
- Suitable for crops with high phosphorus requirement

Available packages | 25 kg
50 kg
Big bag

Component	Concentration (w/w)
Total N	17%
Phosphorus (P ₂ O ₅)	44%

Potassium Nitrate

- A fully water-soluble fertilizer which is suitable for different irrigation systems
- It's a pure and fast acting fertilizer with low Cl content that can be safely used in greenhouses and hydroponic systems
- The nitrogen in this product is in nitrate form which is readily available to plants and increases plant vegetative growth and fixes the symptoms of nitrogen deficiency
- High amount of potassium and low content of nitrogen in Felixper potassium nitrate fertilizer has made it an ideal fertilizer for fruit formation and development stage; improving the taste, flavor, sugar content and quality of the fruits

Available
packages

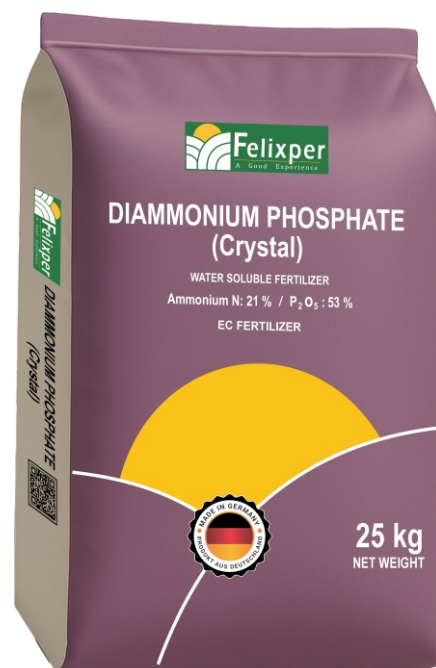

25 kg
50 kg
Big bag

Component	Concentration (w/w)
Total N	13.5%
Potassium (K ₂ O)	46%

Diammonium Phosphate (Crystal)

- A fully water-soluble fertilizer which is suitable for different irrigation systems
- It's a pure and fast acting fertilizer that can be safely used in greenhouses
- This product supplies nitrogen (N) and phosphorus (P) to plants at the same time which makes it a good fertilizer for early growth stages
- With high concentration of phosphorus, DAP promotes strong root establishment and flowering

Available
packages

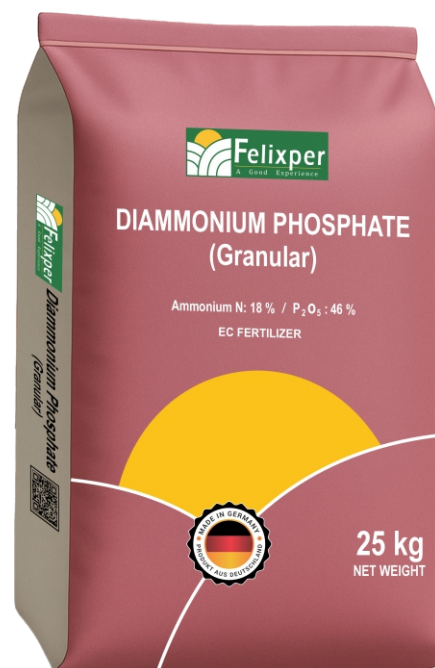

25 kg
50 kg
Big bag

Component	Concentration (w/w)
Ammonium N	21%
Phosphorus (P_2O_5)	53%

Diammonium Phosphate (Granular)

- More suitable to apply by broadcasting machines and for basal application in soil
- This product supplies nitrogen (N) and phosphorus (P) to plants at the same time which makes it a good starter fertilizer
- Once applied to the soil, DAP gradually dissolves in soil moisture, making nitrogen and phosphorus readily available to the plant roots during the time
- Felixper granular DAP is especially beneficial during early crop development, promoting strong root establishment and vegetative growth
- Granular DAP is widely used in conventional farming systems and is not recommended for fertigation or foliar use
- With lower price and lower handling cost compared with crystal form DAP, the granular DAP it is mostly preferred by broad-acre farmers

Available
packages

25 kg
50 kg
Big bag

Component	Concentration (w/w)
Ammonium N	18%
Phosphorus (P_2O_5)	46%

Magnesium Sulfate (Heptahydrate)

- Fully water-soluble and 1-3 mm crystal magnesium sulfate
- Makes a non-turbid water solution without any residue
- With high purity and extremely low Cl and heavy metals content
- Suitable for application through different fertigation systems
- Magnesium has a critical structural role in chlorophyll and is essential for photosynthesis
- Presence of magnesium and sulfate in this product makes it a suitable product for early growth stages

Available
packages

25 kg
50 kg
Big bag

Component	Concentration (w/w)
Magnesium (MgO)	16%
Sulfur (S)	13%

Magnesium Nitrate

- Fully water-soluble and flake form magnesium nitrate with low risk of caking
- Makes a non-turbid water solution without any residue
- With high purity and extremely low Cl and heavy metals content
- Suitable for application through different fertigation systems
- Magnesium has a critical structural role in chlorophyll and is essential for photosynthesis and greenness of the leaves
- A suitable product to supply plants demand for magnesium and nitrogen during the early growth stages

Available
packages

25 kg
50 kg
Big bag

Component	Concentration (w/w)
Magnesium (MgO)	15.4%
Total N	10.8%

Zinc Sulfate (Monohydrate)

- Fully water-soluble and powder form zinc sulfate
- Makes a non-turbid water solution without any residue
- With high purity and extremely low Cl and heavy metals content
- Suitable for application through different fertigation systems
- Zinc has vital roles in activation of enzymes and synthesis of proteins. It also has a structural role in integrity of biological membranes
- Zinc sulfate is the most commonly used Zn fertilizer around the world
- Zinc is also an important element in human health so supplying enough Zn to plants can finally improve human health through biofortification process

Available packages | 25 kg
50 kg
Big bag

Component	Concentration (w/w)
Zinc (Zn)	34%
Sulfur (S)	17%

Manganese Sulfate (Monohydrate)

- Fully water-soluble and powder form manganese sulfate
- Makes a non-turbid water solution without any residue
- With high purity and extremely low Cl and heavy metals content
- Suitable for application through different fertigation systems
- Manganese sulfate is the most common type of Mn containing fertilizer in the market
- Manganese acts in plants as the activator of enzymes and also has a role in oxygen production during the photosynthesis
- Soybean, grains, peanut and different types of beans are more sensitive to Mn deficiency

Available
packages

25 kg
50 kg
Big bag

Component	Concentration (w/w)
Manganese (Mn)	32%
Sulfur (S)	18%

NPK + TE (Soluble)

- Fully water-soluble and powder form NPKs in different formulations
- Makes a non-turbid water solution without any residue
- With high purity, free of Cl and extremely low heavy metals content
- Suitable for application through different fertigation systems
- Simultaneous supply of three macroelements to plants
- Suitable for throughout the growth season as these NPKs are produced in different formulations with high N, high P and high K analyses
- In addition to N, P and K, this range of products contains high quality microelements in EDTA form that helps the supply of microelements to the plants
- NPK application reduces the need for repeated agronomic practices in field as they supply plants with numerous macro and micro nutrients at the same time

Available packages	2 kg
	10 kg
	25 kg

NPK + TE (Granular)

- Low in sodium and chloride
- More suitable to apply by broadcasting machines and for basal application.
- Available in different formulations with varying ratios of nitrogen (N), phosphorus (P), and potassium (K) to meet crops specific needs throughout the growth season
- Provides simultaneous supply of the three main nutrients to plants
- In addition to N, P and K, this range of products contain high quality microelements that helps the supply of microelements to the plants
- Granular NPKs are slow-release fertilizers that supply plants with several macro and micronutrients during a longer period of time

Available
packages

25 kg
50 kg
Big bag

FerroGarten (Fe EDDHA 6%)

- Fully water-soluble and microgranule form iron chelate
- Makes a non-turbid water solution without any residue
- Suitable for application in soil and through different fertigation systems
- Stability of the chelate from pH range of 4-10
- The best option where there are adverse soil conditions like alkaline or high pH soils
- Correct the symptoms of deficiencies like chlorosis
- When applied early in the season, it promotes the production of chlorophyll and greener leaves that results in better photosynthesis, growth and yield

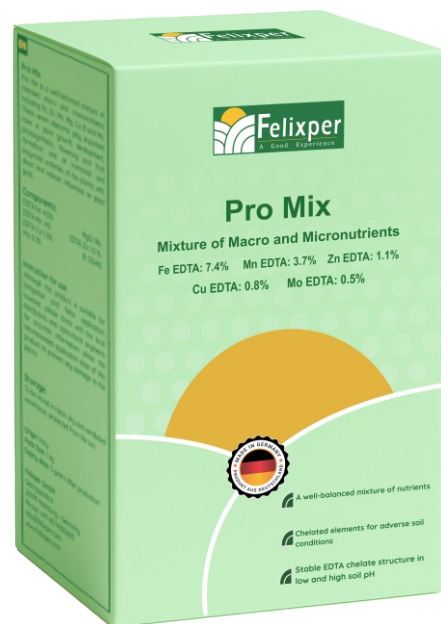

Available packages | 1 kg
5 kg
10 kg

Component	Concentration (w/w)
Water Soluble Iron (Fe EDDHA)	6%
Fe EDDHA with ortho-ortho isomer	Various ortho-ortho rates are available up to 6

Pro Mix (Mixture of Micronutrients EDTA)

- Fully water-soluble and green/pale brown microgranule fertilizer
- Makes a non-turbid water solution without any residue
- Suitable for application through different fertigation systems and foliar application
- The best option where deficiency of several elements is diagnosed or the symptoms cannot be related to the deficiency of a specific element
- Suitable for early growth stages when plants need high amount of micronutrients
- Provides plants with the most important micronutrients in a single application

Available
packages

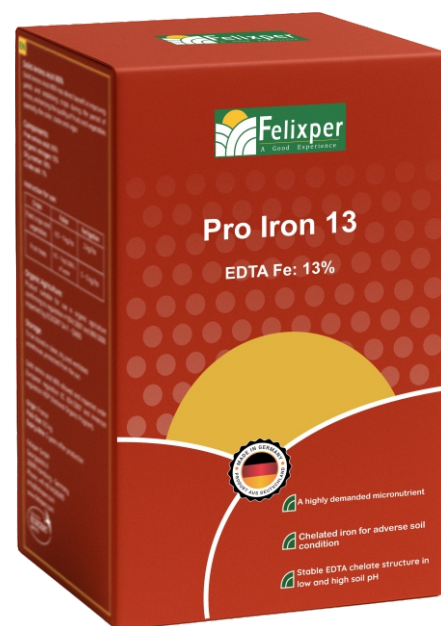

1 kg
5 kg
10 kg

Component	Concentration (w/w)
Water Soluble Iron (Fe EDTA)	7.4%
Water Soluble Manganese (Mn ETDA)	3.7%
Water Soluble Zinc (Zn EDTA)	1.1%
Water Soluble Copper (Cu EDTA)	0.8%
Water Soluble Molybdenum	0.5%

Pro Iron 13 (Fe EDTA)

- Fully water-soluble and microgranule iron chelate fertilizer
- Makes a non-turbid water solution without any residue
- Suitable for application through different fertigation systems and foliar application
- Stability of Fe EDTA chelate between the pH of 4-10
- Iron has structural role in chlorophyll thus it is vital for photosynthesis
- Iron is the part of the enzymes which are used by nitrogen-fixing bacteria
- Prevents iron deficiency in plants and corrects deficiency symptoms quickly

Available packages | 1 kg
5 kg
10 kg

Component	Concentration (w/w)
Water Soluble Iron (Fe)	13%
Iron Chelated with EDTA	13%

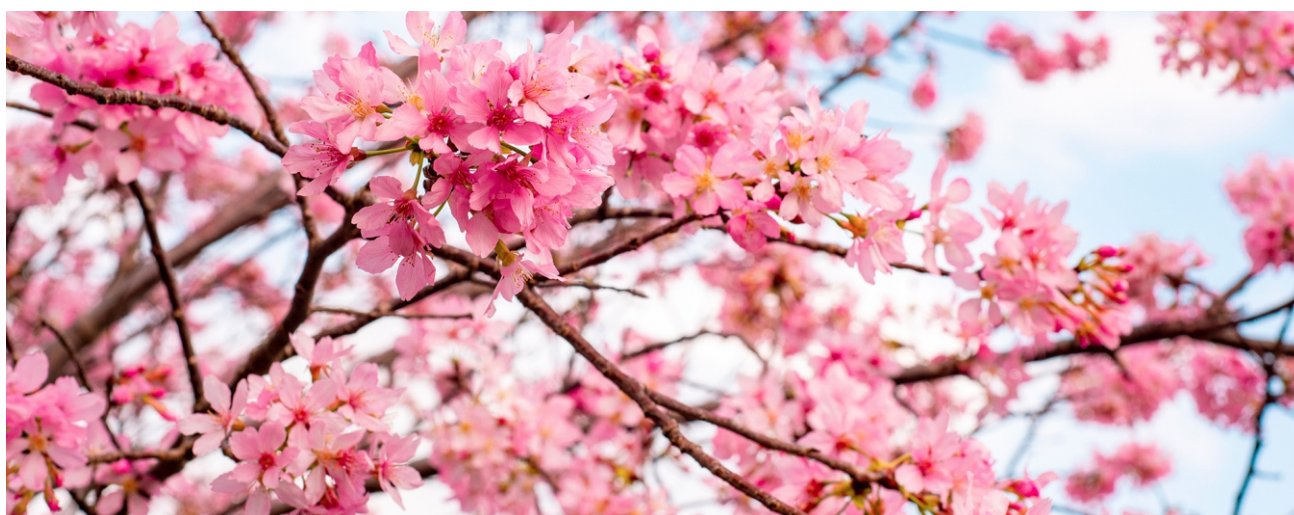

Pro Zinc 15 (Zn EDTA)

- Fully water-soluble and microgranule zinc chelate fertilizer
- Makes a non-turbid water solution without any residue
- Suitable for application through different fertigation systems and foliar application
- Stability of Zn EDTA chelate between the pH of 4-11
- Regulates and promotes hormonal and enzymatic activities in plants
- Prevents zinc deficiency in plants and corrects deficiency symptoms quickly
- Can be used in early growth stages to improve flowering and pollination
- Also, can be used as an after-harvest fertilizer to boost the flowering of fruit trees in next season

Available packages | 1 kg
5 kg
10 kg

Component	Concentration (w/w)
Water Soluble Zinc (Zn)	15%
Zinc Chelated with EDTA	15%

Pro Manganese 13 (Mn EDTA)

- Fully water-soluble and microgranule manganese chelate fertilizer
- Makes a non-turbid water solution without any residue
- Suitable for application through different fertigation systems and foliar application
- Stability of Mn EDTA chelate between the pH of 4-11
- Regulates and activates enzymes activity in plants
- It is essential to photosynthesis reactions and is necessary for the production of oxygen molecules in photosynthesis process
- Promotes the formation of lignin which in turn promotes the strength of the cell walls
- Prevents manganese deficiency in plants and corrects deficiency symptoms quickly

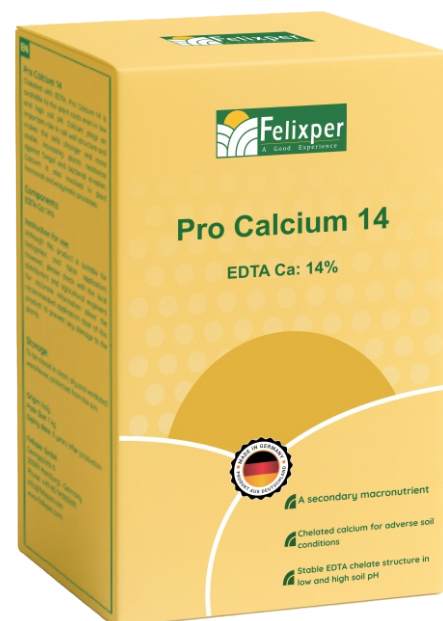

Available packages | 1 kg
5 kg
10 kg

Component	Concentration (w/w)
Water Soluble Manganese (Mn)	13%
Manganese Chelated with EDTA	13%

Pro Calcium 14 (Ca EDTA)

- Fully water-soluble and microgranule calcium chelate fertilizer
- Makes a non-turbid water solution without any residue
- Suitable for application through different fertigation systems and foliar application
- Stability of Ca EDTA chelate between the pH of 4-11
- Calcium is the most important element for formation of strong cell walls, resulting in improved shelf life and after-harvest quality of the fruits
- Promotes plant resistance against biotic and environmental stresses and prevents physiological disorders like tomato blossom-end rot, apple bitter pit and fruits cracking

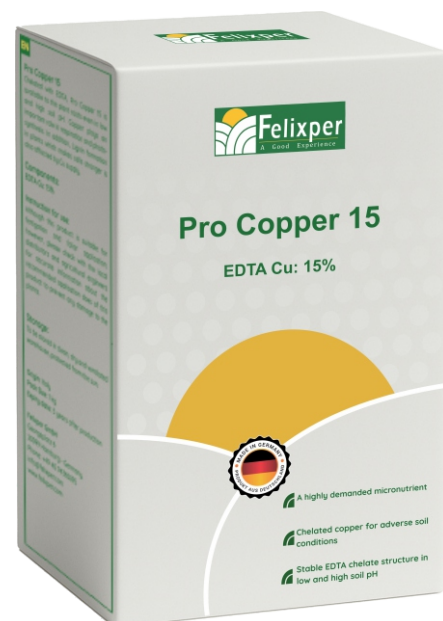

Available packages | 1 kg
5 kg
10 kg

Component	Concentration (w/w)
Water Soluble Calcium (Ca)	14%
Calcium Chelated with EDTA	14%

Pro Copper 15 (Cu EDTA)

- Fully water-soluble and microgranule copper chelate fertilizer
- Makes a non-turbid water solution without any residue
- Suitable for application through different fertigation systems and foliar application
- Stability of Cu EDTA chelate between the pH of 4-11
- Copper has a vital role in photosynthesis and respiration
- Copper supports lignin production and strengthens the cell wall that prevents cereals lodging
- Prevents copper deficiency in plants and corrects deficiency symptoms quickly

Available packages | 1 kg
5 kg
10 kg

Component	Concentration (w/w)
Water Soluble Copper (Cu)	15%
Copper Chelated with EDTA	15%

Kalium Thiosulfate (KTS)

- Fully water-soluble liquid fertilizer that leaves no residue
- Free of chloride
- Suitable for application through different fertigation systems and foliar application
- Due to chemical structure, potassium thiosulfate (Kalium Thiosulfate) is more active than normal potassium sulfates with higher absorption efficiency and faster reaction in soil and plant
- Increases plant growth and yield, improves fruit taste and quality and enhances the oil content of the oil crops
- Induces plant resistance against biotic and abiotic stress

Available packages

- 1 Liter
- 5 Liter
- 10 Liter

Component	Concentration (w/w)
Potassium (K_2O)	27%
Sulfur (S)	18%

AminoGarten L (Liquid Amino Acid)

- Fully water-soluble and liquid form amino acid
- Suitable for organic farming
- Suitable for application through different fertigation systems
- A mixture of 17 free amino acids with great nutritional effects on plants
- Improves plant resistance to abiotic stresses
- When applied in soil, it contributes to the nutrition of soil microorganisms that finally improves soil conditions for plant growth
- Enhances the growth rate and yield in addition to fruits quality and taste

Available packages

- 1 Liter
- 5 Liter
- 10 Liter

Component	Concentration (w/w)
Total N	3%
Organic Matter	22%
Total Amino Acid	20%
Free Amino Acid	19%

AminoGarten S (Solid Amino Acid)

- Fully water-soluble and powder form amino acid
- Suitable for organic farming
- Suitable for application through different fertigation systems
- A mixture of 17 free amino acids with great nutritional effects on plants
- Improves plant resistance to abiotic stresses
- When applied in soil, it contributes to the nutrition of soil microorganisms that finally improves soil conditions for plant growth
- Enhances the growth rate and yield in addition to fruits quality and taste

Available packages | 1 kg
5 kg
10 kg

Component	Concentration (w/w)
Total N	13%
Free amino acid	80%

HumiGarten L (Liquid Humic Acid)

- Fully water-soluble and liquid humic acid
- Makes a non-turbid water solution without any residue
- Suitable for application through different fertigation systems
- High content of pure humic acid from leonardite
- Improves soil physico-chemical and biological conditions that favors root development
- Balances the pH of the soil and consequently improves nutrients absorption
- The best option in alkaline and saline soils where high pH prevents mobility and absorption of nutrients

Available packages

- 1 Liter
- 5 Liter
- 10 Liter

Component	Concentration (w/w)
Humic Acid	19%
Fulvic Acid	3%
Potassium (K ₂ O)	6%
Organic Carbon	25%

HumiGarten S (Solid Humic Acid)

- Fully water-soluble and black microgranule humic acid
- Makes a non-turbid water solution without any residue
- Suitable for application through different fertigation systems
- High content of pure humic acid from leonardite
- Improves soil physico-chemical and biological conditions that favors root development
- Balances the pH of the soil and consequently improves nutrients absorption
- The best option in alkaline and saline soils where high pH prevents mobility and absorption of nutrients

Available packages | 1 kg
5 kg
10 kg

Component	Concentration (w/w)
Humic Acid	70%
Potassium (K_2O)	12.5%
Organic Carbon	40%

AlgaGarten L (Liquid Seaweed Extract)

- Fully water-soluble and dark brown/black liquid seaweed extract
- Makes a non-turbid water solution without any residue
- Suitable for application through different fertigation systems and foliar application
- 100% pure and without any additives obtained from *Ascophyllum nodosum*
- High quality and organic biostimulant for plant growth
- Improves plant growth and yield and the quality of the fruits
- Improves plant resistance against biotic and abiotic stresses

Available
packages

1 Liter
5 Liter
10 Liter

Component	Concentration (w/w)
Total N	0.5%
Potassium (K ₂ O)	6.5%
Alginic Acid	3%
Mannitol	1%
Organic Carbon	10%

AlgaGarten S (Solid Seaweed Extract)

- Fully water-soluble and dark brown/black solid seaweed extract
- Makes a non-turbid water solution without any residue
- Suitable for application through different fertigation systems and foliar application
- 100% pure and without any additives obtained from *Ascophyllum nodosum*
- High quality and organic biostimulant for plant growth
- Improves plant growth and yield and the quality of the fruits
- Improves plant resistance against biotic and abiotic stresses
- Contains high amount of potassium that results in higher quality and taste of fruits and also increases plants tolerance against cold stress

Available
packages

1 kg
5 kg
10 kg

Component	Concentration (w/w)
Total N	1.5%
Potassium (K ₂ O)	20%
Alginic Acid	10%
Mannitol	4%
Organic Carbon	30%

Colorina (Fruit Coloring)

- Fully water-soluble and liquid potassium fertilizer
- Makes a non-turbid water solution without any residue
- Suitable for application through different fertigation systems and foliar application
- The best option where high potassium contents are required
- Presence of amino acid gives a synergistic effect on potassium function in plant
- Because of having sufficient potassium plus free amino acids and some of the micro and macroelements, this product improves the coloring of the fruits and their taste and flavor if applied during the fruit ripening period

Available packages | 1 Liter
5 Liter
10 Liter

Component	Concentration (w/w)
Potassium (K_2O)	15%
Magnesium (MgO)	1.5%
Water Soluble Iron (Fe EDTA)	0.04%
Water Soluble Manganese (Mn EDTA)	0.04%
Water Soluble Zinc (Zn EDTA)	0.04%
Free Amino Acid	1.56%

Florina (Flowering and Fruit-Set Promoter)

- Fully water-soluble and liquid plant growth promoter
- Makes a non-turbid water solution without any residue
- Suitable for application through different fertigation systems and foliar application
- The best combination for early growth stages, before/after flowering
- Phosphorus, boron and molybdenum are all the most important elements for flowering and pollination phase; affecting fruit formation and yield
- A hormone-free special product for boost of flowering and fruit development

Available
packages

1 Liter
5 Liter
10 Liter

Component	Concentration (w/w)
Phosphorus (P_2O_5)	7.4%
Boron (B)	2.2%
Molybdenum (Mo)	3%
Free Amino Acid	3%
Polysaccharide	0.07%

Growthina (Growth Promoter)

- Fully water-soluble and liquid amino acid
- Makes a non-turbid water solution without any residue
- High purity and plant origin amino acid
- Suitable for application through different fertigation systems and foliar application
- A natural bio-stimulant for plant metabolism and growth; improving plant growth, yield and fruits quality
- Helps plants to survive stress conditions including biotic and abiotic stresses (drought, salinity, low/high temperature and heavy metals toxicity)

Available packages | 1 Liter
5 Liter
10 Liter

Component	Concentration (w/w)
Total N	7%
Organic N	4%
Ammonia N	3%
Free Amino Acid	20%

Fulvina (Liquid Fulvic Acid)

- Fully water-soluble and liquid form of fulvic acid
- Makes a non-turbid water solution without any residue
- Suitable for application through different fertigation systems and foliar application
- It improves soil structure, water retention capacity, cation exchange capacity and biological properties
- It helps the growth and development of plant root system
- As a plant growth regulator, it increases plant growth, yield and color and taste of fruits and their size uniformity

Available
packages

1 Liter
5 Liter
10 Liter

Component	Concentration (w/w)
Total N	2.3%
Phosphorus (P_2O_5)	3%
Potassium (K_2O)	2.3%
Fulvic acid	24%
Organic Matter	28%

Rootina (Root Development)

- Fully water-soluble and liquid root growth promoter
- Makes a non-turbid water solution without any residue
- Suitable for application through different fertigation systems
- A well-balanced combination of macro and microelements and organic substances that is specifically designed to promote root growth and development
- Increases nutrients absorption and plant growth by making the root system stronger
- Can be used during the transplantation to reduce the risk of damage to the roots and increase the chance of successful transplanting

Available
packages

1 Liter
5 Liter
10 Liter

Component	Concentration (w/w)
Total N	3%
Phosphorus (P₂O₅)	6%
Potassium (K₂O)	4%
Calcium (Ca)	1%
Manganese (Mn)	0.5%
Zinc (Zn)	0.5%
Boron (B)	0.2%
Free Amino Acid	4.5%
Fulvic Acid	2.5%

Potassium Phosphite (20-30)

- Fully water-soluble liquid fertilizer that leaves no residue
- Suitable for application through different fertigation systems and foliar application
- Highly efficient PK fertilizer that supplies plants with phosphorus and potassium at the same time
- The phosphorus in this product presents in the form of ion phosphite that enhances plant resistance against fungal diseases
- Elements in this product easily penetrate into plant cells and because of being systemic, it facilitates the distribution of potassium and phosphorus in plant
- Activates plant metabolism after stress conditions and help plants to recover after adverse conditions

Available
packages

1 Liter
5 Liter
10 Liter

Component	Concentration (w/w)
Potassium (K_2O)	20%
Phosphite (P_2O_5)	30%

Ammonium Polyphosphate (Slow Release Phosphorus)

- Fully water-soluble liquid fertilizer that leaves no residue
- Free of chloride and biuret
- Suitable for application through different fertigation systems and foliar application
- It's a starter fertilizer that supplies plants with nitrogen and phosphorus in early growth stages
- The phosphorus in this fertilizer is in polymeric form that is not absorbable by plant roots. It gradually converts to orthophosphate and becomes absorbable to plants during the time, so it is a slow-release fertilizer

Available packages

- 1 Liter
- 5 Liter
- 10 Liter

Component	Concentration (w/w)
Total N	10%
Phosphorus (P₂O₅)	34%

SulfAzote (Slow Release Nitrogen)

- Fully water-soluble liquid fertilizer that leaves no residue
- Suitable for application through different fertigation systems and foliar application
- From 20% nitrogen in SulfAzote, 8% is normal urea and 12% is formaldehyde form. Formaldehyde is the slow-release form of urea which provides plant with nitrogen in a longer period of time
- SulfAzote reduces the need for several urea application and reduces the loss of nitrogen in soil
- *Humulus lupulus* extract in this product act as the adjuvant and increases the efficiency of foliar application

Available packages

- 1 Liter
- 5 Liter
- 10 Liter

Component	Concentration (w/w)
Total N	20%
Magnesium (MgO)	3%
Sulfur (So ₃)	6%

Also containing *Humulus lupulus* extract + TE
